

FOURTH CAMP TO BE ESTABLISHED

Activity in Allamore Gold and Copper Field Is Increasing Rapidly.

Toyal, Tex., June 26.—A second mining camp is to be established at Allamore, where mining activity is on the increase, following the successful operation of a number of claims.

J. L. Johnson, who has been doing assessment work on his Allamore claims for several weeks, returned to Toyal and reported much activity in the camp. The new camp is to be near the present one and will be made up of a number of claim workers who will take their families to Allamore. Johnson secured some Mexican workers and has gone back to the gold field. The new camp to be established gives the field four permanent camps. Johnson brought in some fine samples of ore and he said the various properties are shipping regularly and getting good returns. Much blasting is being done and the hills are rapidly showing the effect of the activity.

ARIZONA COPPER CO. MUST PAY \$40,000 BACK TAXES

Phoenix, Ariz., June 26.—The Arizona Copper company must pay the county of Greenlee \$40,000 in back taxes in addition to interest and court costs.

John M. Webster, former treasurer of Greenlee county, brought suit against the company and obtained judgment in the superior court. This decision was upheld by the state supreme court, and the company appealed. The federal supreme court decided that a purely state matter was involved and that it had no jurisdiction.

200 BARS OF BULLION SHIPPED FROM MOGOLONS

Santa Fe, N. M., June 26.—Two and a quarter tons of bullion or 200 bars, were shipped by the Socorro Mining and Milling company, through Mogolons during the present month.

The Silver Cattle Mining and Milling company has put its main shaft dry to the bottom, a distance of 300 feet.

The Real Suffrage Thought of Women

Motherhood is the thought uppermost in woman's mind. And with it, of course, comes the question of comfort, of helpful aids and influences.

Among the best of these is a well known external remedy, "Mother's Friend." It is gently applied to the surface muscles. These are lubricated, toned, made pliable so they stretch as nature requires without the strain and pain on cords and ligaments.

This influence extends through the myriad of nerves to deeper organs, the internal organs. And thus a period of repose must reflect itself not only in the mind of the mother, but upon the babe to come.

Young mothers who have used "Mother's Friend" have written to say how relieved they were at the absence of morning sickness, extreme nervousness, and other distresses of which they had heard and feared. Get a bottle of "Mother's Friend" at any drug store. Simply apply it over the stomach muscles and rest assured of perfect safety and comfort day and night. Write to Broadfield Regulator, 409 Lamar Bldg., Atlanta, Ga., for their handsome and instructive book.

UNITED EASTER RESUME AT ONCE

Free Gold Makes Its Appearance, Tiny Cubes Being Plainly Visible.

Kingman, Ariz., June 26.—Ore worth \$25.00 a ton is being broken down across a width of 25 feet on the 555 foot level of the United Eastern mine. The vein at that point is 27 feet wide. Drifts are being run in both directions to determine the full extent of the ore body.

Free gold has made its appearance in the vein material. In some of the quartz cubes of gold are plainly visible with the naked eye.

Development work is being confined to extending the drifts and to blocking out ore in readiness for the mill. The United Eastern company is planning to build it. It is reported that work on this plant will commence within 40 days. Arrangements are being made to treat some of the ore at the Gold Road mill.

A drive west from the 200 foot level of the Pittsburgh mine is penetrating ore identical in appearance with that of the United Eastern. Values are about the same. Every indication is that this Pittsburgh drive is nearing a great ore shoot. The drive is being advanced eight feet every 24 hours.

The main working shaft of the Black Range has been timbered to a depth of 115 feet. A permanent camp has been established for the miners and a permanent road built to the mine, in preparation for an extended campaign of development work. Installation of a modern machinery plant is to begin at once. This will include a 60 horsepower engine, 200 cubic foot compressor, hoisting engine, ore cars, buckets, air pipe and rails.

As soon as the equipment is in place an additional force of miners will be employed and the shaft sunk to a depth of 300 feet. At the 200 foot point the vein system will be crosscut and drifts run. It is believed that the drift on the 155 foot level carries \$2.50 to \$7 a ton in gold.

Recent developments at the Carter mine are most satisfactory. In the face of a drift on the 150 foot level is a wide stringer of quartz that carries milling values. It is believed that the apex of an ore shoot has been tapped in the Carter and that deep development is necessary to open up a big body.

NEARLY 500 TONS OF COAL SHIPPED

Phoenix, Ariz., June 26.—A. B. Jones, who has been making regular shipments from the old Planet mine, has shipped nearly 500 tons of coal since the new interests are negotiating for his lease. Jones has about 500 tons of shipping ore in the dump.

SEVENTH STREET ROBBERY

Procopio, Granddoo, who, with Otto Martinez, is charged with taking \$3.00 for the room of Juan Q. McDonald on Seventh street, was arrested Tuesday afternoon by the city detectives. A third youth, said to be implicated, has not been apprehended. Young Martinez was brought to the station Tuesday morning by McDonald himself.

ENTERPRISE TO RESUME AT ONCE

Everheart Leases Old Dallas Mine; Will Operate It; Pecos Mine Active.

Van Horn, Tex., June 26.—Operations are to be resumed at once at the Enterprise mine, formerly the Dallas mine. T. B. Everheart has leased the mine from T. B. Owen and has made arrangements to begin at once the work of extracting and shipping ore.

Activity at the Pecos mine continues and excellent results are being obtained. A second shipment of ore to the El Paso smelter is ready and it is expected to show values 100 percent better than the former shipment.

Smelter returns from the first shipment of ore from the Pecos mine to El Paso showed a net value per ton of \$24, exclusive of mining cost and hauling to Van Horn. After deducting these two items the net profit on the ore is about \$14. The mine is expected to develop into a bonanza at the present high price of metals.

REPORTED OIL DISCOVERY

Columbus, N. M., June 26.—It is reported that there has been oil discovered about six miles southeast of here. There have been about fifty claims located and it is expected that further development will be started right away.

SECOND ARREST MADE IN SEVENTH STREET ROBBERY

Procopio, Granddoo, who, with Otto Martinez, is charged with taking \$3.00 for the room of Juan Q. McDonald on Seventh street, was arrested Tuesday afternoon by the city detectives. A third youth, said to be implicated, has not been apprehended. Young Martinez was brought to the station Tuesday morning by McDonald himself.

ARABIAN MINERS AT RAY QUICKLY RETURN TO WORK

Phoenix, Ariz., June 26.—Arrivals from Ray state the recent report of trouble at that camp were greatly exaggerated. It all arose over the publication in a Mexican paper of a speech made at Veracruz by a "patriot" who predicted that Mexico would be forced to declare war on the United States. Some of the miners, taking this seriously, quit work and prepared to go to Mexico to fight for their native land.

Sheriff Henry Hall swore in several extra deputies and eight peace officers were sent from Phoenix. There was no actual trouble, however, and most of the Mexicans have returned to work.

STRIKE IN JARILLAS REPORTED

Rich One; El Pasoan Interested.

Santa Fe, N. M., June 26.—A strike of apparently much importance has been made on the south end of the Jarilla range in Grant county.

The fissure vein which has been uncovered is more than four feet wide and is traceable for several thousand feet. The property has been named the Refugee gold mine and carries an estimated yield of 4 percent copper with 30 in gold.

On nearby U. S. Observatory hill, N. E. Bates of El Paso has located another fissure vein, six feet wide, carrying at the grass roots 3 percent copper and gold and silver.

Regular shipments are being made from the Jarillas by T. R. Haines, who is operating the Jarilla, W. J. Fisher and C. E. Hartley, operating the Garnet; Donald Best, operating the Nannie Baird; W. J. Lowery, working the Lucky; the Mollie Gibson and Copper King.

LILY MILK

"Welch Week" July 2-9

The "open season" for Welch's extends from January first to December thirty-first. It's good in cold weather, better in warm weather, and best when everything else is hot.

But not all folk have learned how good Welch's is, and this week throughout the United States leading retailers are displaying

Welch's "The National Drink"

with the suggestion that you buy at least one bottle. You do not know how good grape juice is until you have tried Welch's, and you are not getting the full benefit from Welch's if you only have it once in a while as a "treat."

Try a small glass of Welch's once a day. Send for our valuable booklet, "Marion Harland's 99 Selected Recipes." Look for the Welch display in your favorite store and buy today.

THE A-B-C OF National Defence

Our Three Lines of Protection—Ships, Harbor-Forts and Army.

By W. J. MULLER, Author of "The Invasion of America."

THE deciding factor in the problem of defending the continental territory of the United States is that there are more than 20,000 miles to defend, all of it coast line.

No other nation has a similar defense problem. The conditions make it impossible for either a navy alone or an army alone to furnish complete protection. Therefore, the principle which has been accepted and never altered is that there must be three lines of defense: a fleet, a system of harbor defenses and a mobile army.

Unfortunately the harbor defenses and the army have come to be regarded as one, both by the public and Congress. This grave fallacy has led the nation to fall into the mistaken belief that harbor defense meant defense of the entire coast.

Furthermore, the garrisons of the harbor defenses, known as coast artillery, have been counted as part of the strength of the mobile army, which has given a most misleading idea as to the actual size of that army. Coast artillery cannot possibly be used to strengthen the mobile army in time of war. It is locked up in the harbor defenses and cannot be moved from them so long as there is a hostile ship afloat.

It is urgent that Americans shall recognize clearly that the harbor defenses and the mobile army have functions that are absolutely different. The harbor defenses are fixed and operate only against an enemy who seeks them. The mobile army is the only American land force that is free to act against an invader.

In fatally incorrect proportion. In point of actual representation and efficiency, the present values of the three lines of defense are: (1) harbor defenses; (2) fleet; (3) mobile army.

This is a fatally incorrect proportion. The correct relative values, if every line of defense is properly represented, will be (1) fleet; (2) mobile army; (3) harbor defenses.

It means, of course, not that the efficiency of the harbor defenses should be lessened, but that the fleet must be so strengthened that it will serve as the first and most powerful line of defense, while the army should be increased because in the event of invasion it has to defend the harbor defenses as well as the country.

The harbor defenses lead in efficiency today largely because they are matters of permanent engineering. The corps of engineers of the United States army, famous for its achievements, built them so that they are the admiration of foreign experts. Being permanent, they have not suffered like the ever-changing army and navy from the whimsical irregularity of congressional legislation. They need certain important improvements, which will be named hereafter, but their most direct effect is a gross weakness of trained garrisons. If the other two lines of defense were in such satisfactory condition or so easily to be made perfect, there would be little need for anxiety.

It is recognized by military experts that the name "coast defenses" has been applied so generally to these works that they do not defend the coast. They protect only the very limited harbors whose entrances their guns command. Doing this, they are entirely the whole purpose for which they are designed. They prevent absolutely an attack from the sea on an American port. They prevent a hostile navy force from establishing any naval base in a secure harbor. They prevent a hostile army from landing in a harbor and force it to undertake the hazardous operation of landing on the open coast. As long as the forts hold out, they make the harbor a safe refuge for American naval and mercantile shipping.

Can they hold out? The answer no longer is theoretical. It is the answer that has been given by the Turkish defenses of the Dardanelles in the most powerful battle-ship of the present day in the first sea attack—an attack that probably was the most determined effort

ever made by ships against sea-coast fortifications. Before the Dardanelles defenses were not equal to the American. Undoubtedly they have been strengthened greatly, but it is not conceivable that they can have the defense more powerful than the defenses of such ports as New York, Boston and San Francisco.

Natural, But Absurd Question. It has been asked often by laymen why the entire coast line should not be defended by such works, thus putting a stop forever to any danger of invasion. To military engineers such a question appears too absurd to be worth a stop for a moment to consider. The reply is simple. The utmost effective range of the 14-inch rifled cannon, the largest sea-coast gun, is 18,000 yards, or a trifle more than 19 miles. Therefore, to protect the whole coast line, would have to be built a little less than 20 miles apart. If there is to be no gap uncovered by gun fire, for the 20,000 miles of coast there would mean 1000 fortifications.

At the valuation placed on Forts Hamilton and Wadsworth in New York City, such a chain of defenses would cost ten billions of dollars to build and arm, and would demand the continuous services of one-half million men, even at the present inadequate rate of garrisoning existing defenses. It is impossible, then, to protect the American coast with fixed defenses greatly in excess of the existing ones. By far the greater part of the coast line must depend on the remaining two lines of defense—the fleet and the mobile army.

Value of the Fleet. Attack on the United States can come only by way of the sea. Even an attack over the northern border would involve first a land operation. America's possession and foreign interests can be held or lost only by control of the sea.

If that line of defense were absolutely perfect, war never could be brought home to the United States. It would be fought out far from the American coast. American cities never would see an invader.

The thing in life, commerce and war-expedition that this would represent can be measured only by the power of the navy. The navy is the key to the strength of a nation and the key to the purpose that may be achieved.

Nervous Periodical Headaches

Succumb to Anti-Kamnia Tablets

This trouble commonly called "rick headache," is said to be due to the retention of uric acid in the system. Often it is stated that a poor condition of the blood is a cause of these headaches, or that it is a nervous condition and in certain cases, no doubt this is true.

Where treatment is demanded, it is more for the pain than anything else, and Dr. A. F. Schellhuth of Louisville, has found Anti-Kamnia Tablets to give prompt and satisfactory relief. "Rest should be insisted upon," he says, "and the patient should go to bed, darken the room, and all the attendants and family should be as quiet as possible. An emetic will sometimes shorten the attack. The bowels should be kept open with 'Aristol'; a hot bath and a thorough rub-down with a coarse towel, often give grateful relief. Two Anti-Kamnia Tablets when the first signs appear, will usually prevent the attack. During an attack, one tablet every hour or two will shorten the attack and relieve the cause and vomiting." These tablets may be obtained at all druggists. Ask for A-K tablets. They are also useful for nervous headaches, neuralgia and all pains.

BAT THE RAT

Join the Clean-Up Club and Kill Off the Rats

Boards of health everywhere are trying to exterminate rats, because of their menace to health and destruction of property. But without waiting for the health authorities to do the work for you, do your duty and use the only effective weapon in the war on rats, Stearns Electric Paste. Get a two ounce box from your druggist for twenty cents and in one night it should kill off all the rats and mice in your home, barn or garage.

Remember above all that killing a rat now is as effective as killing a dozen a couple of months later. Use Stearns Electric Paste now and prevent further breeding. Directions in fifteen languages in every package.—Adv.
